Foodtronix Customer Setup

Local Integration

Setup Summary

- This integration reads data from the local MSSQL database. BarTrack needs access to the MSSQL database with read permission, mapped to the Foodtronix database. This must be done with the admin user who created the Foodtronix database originally. Usually this would be a Windows administrator user.
- Alternatively, you may have your IT person create a BarTrack user & password in the MSSQL database with read only access to the Foodtronix database, mapped to the Foodtronix database. SQL and Windows authorization mode must be enabled in the database security properties.

Please see MSSQL Customer Setup for further setup details.
