

Square Customer Setup

The account owner needs to perform the steps outlined to generate an Access Token and Application ID. Make sure that **production** is toggled.

1. Open the Developer Dashboard (<https://developer.squareup.com/apps>) and select an existing application (or create one - call it "BarTrack")
2. Set the dashboard mode to Production for a production access token
3. Copy the **Access Token** and **Application ID** in the Credentials section of the page

Documentation Reference link: <https://developer.squareup.com/docs/build-basics/access-tokens>

The screenshot shows the Square Developer Dashboard interface. At the top, there's a navigation bar with 'Square Developer', 'Documentation', 'Technical Reference', 'API Explorer', and a search icon. On the right of the navigation bar is 'My Business'. Below the navigation bar, there's a sidebar on the left with a back arrow and a list of links: 'My First App', 'Credentials' (highlighted in blue), 'OAuth', 'Webhooks', 'Reader SDK', 'Point of Sale API', 'Apple Pay', and 'Locations'. The main content area has a header with 'Sandbox' (in red) and 'Production' (in grey) tabs, and a '← Resources' button. The title 'Credentials' is prominently displayed. Below it, there's a section for 'Application Name' with a text input field containing 'My First App'. A descriptive paragraph follows: 'Use the sandbox to test the Connect v2 API in a non-production environment. Test API endpoints and common failure cases, retrieve sample data, and more. Transactions in the sandbox are not sent to card networks, and credit cards are never charged.' Below this is the 'Sandbox Application ID' section with a text input field containing 'sandbox-sq0ats-GcHOY1BP93Xj7kyraN9ufF'. The 'Sandbox Access Token' section shows a masked token '.....' with a 'Show' button to its right. Below the token is a 'Replace Token' button. At the bottom of the main content area, there's a link 'View legacy sandbox credentials'. A final section titled 'API Version' contains a warning: 'Changing your API version may break your implementation. We recommend checking the changelog before upgrading.'
